

B.Sc.-I (New CBCS Pattern) Semester - II
012A - Botany Paper-I (Morphology and Anatomy of Angiosperms)

P. Pages : 2

Time : Three Hours

GUG/S/23/11572

Max. Marks : 50

-
- Notes : 1. All questions are compulsory and carry equal marks.
2. Draw well labeled diagram where ever necessary.

- 1.** a) Describe modification of tap root. 5
b) Describe modifications of leaf. 5

OR

- c) Breathing roots. **2½**
d) Underground stem modification. **2½**
e) Phyllotaxy. **2½**
f) Types of angiosperms on the basis of habit. **2½**
2. a) Define placentation and write it's types. 5
b) Explain the types of Aestivation. 5

OR

- c) Verticellaster. **2½**
d) Types of gynoecium. **2½**
e) Adhesion of stamens. **2½**
f) Types of composite fruits. **2½**
3. a) Explain types and functions of sclerenchyma. 5
b) Describe theory of root apical meristem. 5

OR

- c) Characters of ground tissue system. **2½**
d) Structure of cambium. **2½**
e) Conjoint bundles. **2½**
f) Secretary tissues. **2½**

4. a) What is secondary growth? Explain secondary growth in Moringa stem. 5
 b) Define anomalous secondary growth. Describe anomalous secondary growth in a monocot stem Dracaena. 5

OR

- c) Primary structure in young dicot root. $2\frac{1}{2}$
 d) Primary structure in monocot stem (diagram only) $2\frac{1}{2}$
 e) Abnormal secondary growth in Boerhaavia. $2\frac{1}{2}$
 f) T. S. of dicot leaf (diagram only) $2\frac{1}{2}$
5. Write **any ten** questions in one or two lines only (diagrams are not necessary) **1x10 =10**
- a) Stilt root
 - b) Root butteress
 - c) Decompound leaf
 - d) Gall flowers
 - e) Pappus
 - f) Caryopsis
 - g) Hydathode
 - h) Phellogen
 - i) Trichomes
 - j) Casparyan strips
 - k) Amphivassal vascular bundle
 - l) Bulliform cells
